Software integration can lower costs and increase productivity and efficiency for your organization.

SIMTO Integration Depot software provides the ability to import data into and export data out of *SIMTO Scheduling*, *SIMTO Planning Workspace*, and *SIMTO Distribution*.

- Web service and/or web site interfaces
- Manually upload Excel XML Worksheets, XML Files, and/or configure to communicate directly with your software
- Use XSLT to convert to your XML formats or ours
- Run automated scheduled tasks to transfer data between your software and M3 software
- Configure to accommodate your needs
- Responsive and helpful M3 staff work to ensure successful integration to accomplish your company goals

| Last Run Start | Last Run End | Status | Records Loaded | Updated By |
|---------------------|---------------------|---------|----------------|------------|
| 5/6/2008 2:18:22 PM | 5/6/2008 2:18:36 PM | Success | 4,893 | CTVrdxf |
| 5/6/2008 2:13:44 PM | 5/6/2008 2:13:59 PM | Success | 4,893 | CTVrdxf |
| 5/6/2008 2:12:21 PM | 5/6/2008 2:12:35 PM | Success | 4,893 | CTVrdxf |

Challenging Situation

In the past, a company's various software systems were stand-alone entities incapable of talking to one another or easily sharing data. This often creates full time jobs for one or more people to manually input data from one system into another. Not only was this inefficient and expensive in terms of labor costs, but it was error-prone as well. Additionally, many opportunities to reorganize and summarize company data in more useful ways were missed. High quality information merged from different systems is sometimes exactly what management needs to make more informed critical decisions regarding a company's future course.

Opportunity

Knowledge is power. The ability to easily import and export data out of your company's software systems and to have software systems from different vendors communicate directly to one another can help you steer your company on a straighter course by streamlining operations and synthesizing data into a more useful format. Time and money are saved and peace of mind is gained as the information necessary to operate and manage your organization is more readily available. The right information assembled in the right way can sometimes provide previously unknown and untapped opportunities!

Solution

SIMTO Integration Depot provides the ability to import data into and export data out of *SIMTO Scheduling*, *SIMTO Planning Workspace*, and *SIMTO Distribution* software solutions quickly and easily. Data can be moved between your systems and M3 systems via various methods, either by connecting to our Integration Depot web services directly or interacting with our web site interface.

If Microsoft Excel makes sense for your company, you can populate an Excel file with data, save it as an XML Worksheet in one easy step, and upload it into our Integration Depot web site interface. If you would prefer to upload an XML file, that option is yours to select as well. Additionally, Integration Depot can be configured so that it connects directly to your company's web services or other software systems to exchange data seamlessly across your organization, either in a user-initiated fashion or as automated scheduled tasks.

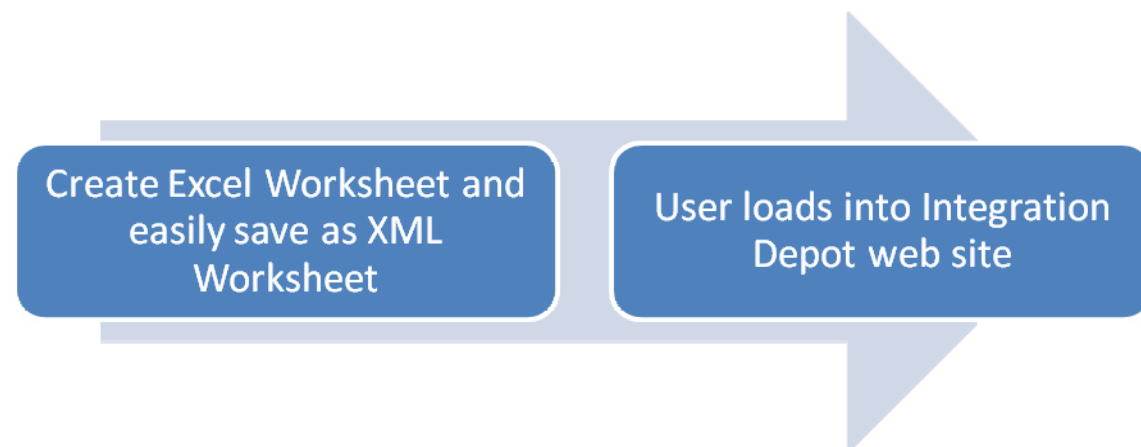

Do you have a particular XML format that your software system expects when it accepts incoming data or an XML format that it creates when it wants to provide data to another system? No problem, XSLT can be used to transform your XML file format to M3's format and vice versa. Need help? Our employees can help you every step of the way to ensure that *SIMTO Integration Depot* meets all your needs and works perfectly for your company.

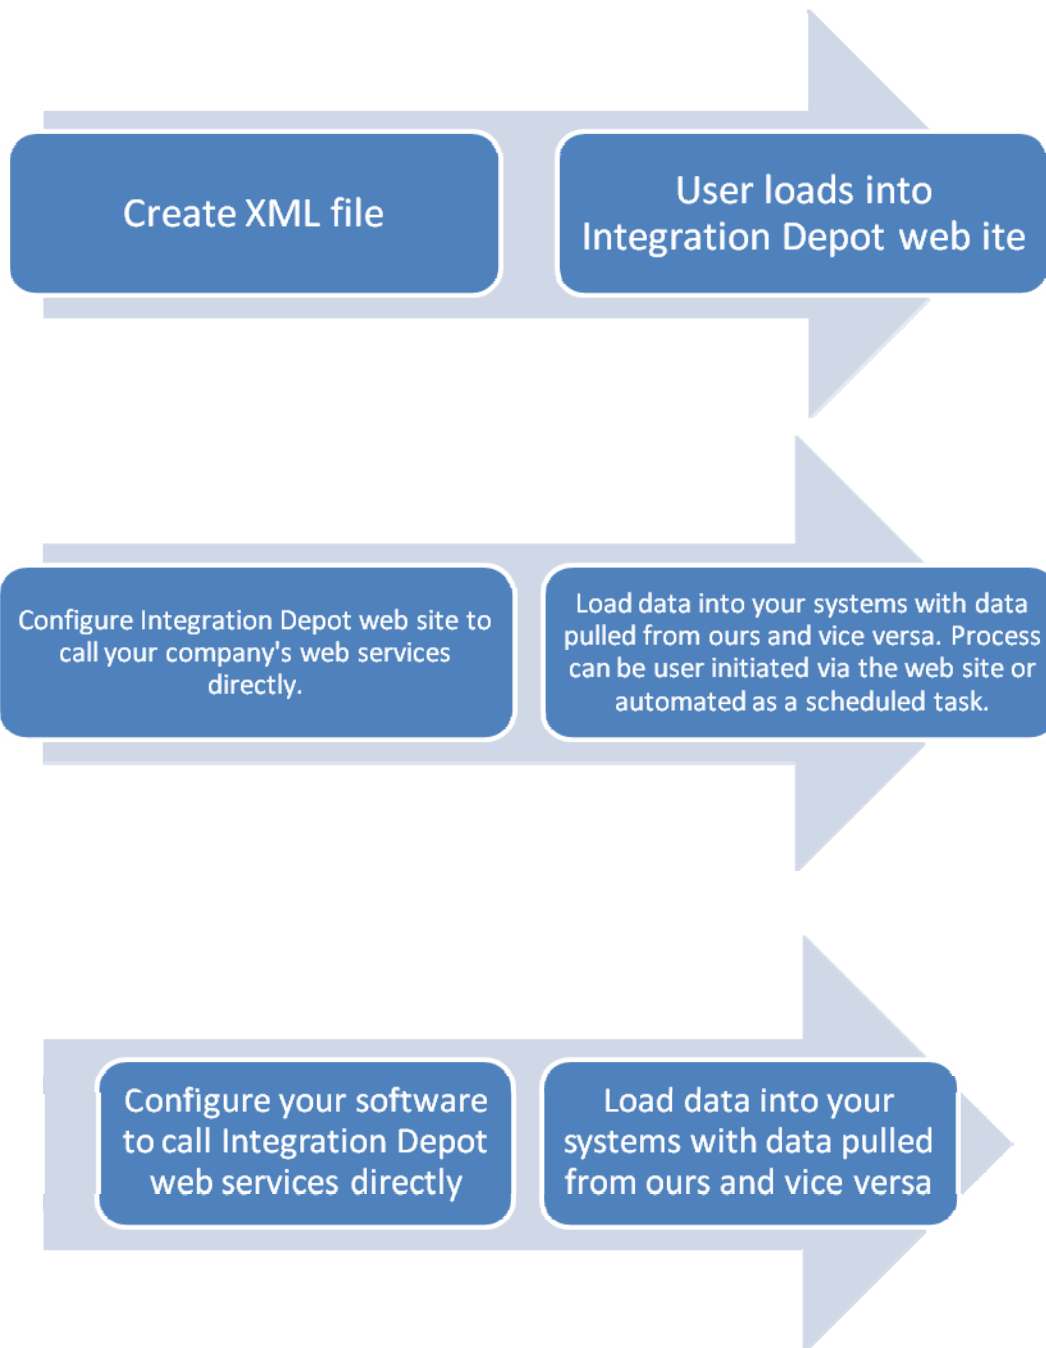

Many Ways to Integrate with Integration Depot

Importing / Exporting Examples

- SIMTO Scheduling
 - Import PI baseline data
 - Import SAP TSW Ship Schedule
 - Export Honeywell BPC Oil Movement System
- SIMTO Distribution
 - Import SAP Prices
 - Import Demand and Price Forecasts
 - Export Distribution Plan
- SIMTO Planning Workspace
 - Import LP Planning Solution
 - Import Demand and Price Forecasts
 - Export Synthesis data into LP Planning System

Basic Dataflows

Conclusion

M3 Technology's *SIMTO Integration Depot* software allows you to reap the rewards of company-wide software integration, increasing your company's overall effectiveness and ultimately your company's bottom line. Use *SIMTO Integration Depot* to easily integrate your company's software systems with other *SIMTO* products like *SIMTO Scheduling*, *SIMTO Planning Workspace*, and *SIMTO Distribution*.
